## Troxler Avenue Pavement Restoration

Last week Quality Saw and Seal began work on the Troxler Avenue Pavement Restoration project. So far they have cut out all the joints on the eastbound lane. Dowel bars will be inserted in the joints to prevent surface movement. After this portion of the project is complete, the contractor will smooth the surface via diamond grinding. The process will then be repeated on the westbound lane. The center traffic lane will have the diamond grind process only.

This project is expected to be completed by the end of the month, in plenty of time for the start of the new school year.

## Spillway Wall Repair Continues

In the past month work to repair the damaged spillway wall has been underway. City crews lowered the lake level allowing the old wall to be removed. The construction of the new wall is continuing.
